

Styling Text in CSS — Quick Reference

text-decoration

- `underline` — **line under text**
- `line-through` — **line through text**
- `none` — **removes decoration (e.g. link underline)**

Link Default Styling

- `<a>` — **blue text, underlined by default**
- Override with `color` / `text-decoration`

font-size

- `font-size: 40px;` — **sets text size, in pixels**
- Larger number — **bigger text**

font-weight

- `normal` — **default weight**
- `bold` — **thicker, heavier text**

font-family

- Multi-word font names need quotes — `"Brush Script MT"`
- Single-word names don't — `Georgia`
- Generic fallbacks — `serif`, `sans-serif`, `cursive`, `monospace`
- `font-family: Georgia, serif;` — **preferred, then fallback**

Style Your Portfolio — Checklist

1. Select a heading — tag / class / id selector
2. Set a custom color — hex or `rgb()`
3. Add `background-color` to a section
4. Apply `text-decoration`, `font-size`, `font-weight`, `font-family`
