

Dressing Up Your Text

Decoration, Size & Fonts in CSS · Lab Discussion Worksheet

Name: _____ Section: _____ Date: _____

How to use this sheet: Keep your **browser** and **VS Code** open beside you. **Attempt and write your answer *before* we discuss it.**

Part 1 — Decorating Text (text-decoration)

TRY THIS · VS CODE

Open the file from last class. Add a new `<p>` below your headings with any line of text. Try setting `text-decoration` to `underline`; then `line-through`.

Q1. What did `underline` and `line-through` do to your text?

TRY THIS · VS CODE

Add an `<a href="#">Click here</a>` link below your paragraph. Look at it in the browser before adding any CSS.

Q2. Without writing any CSS, what does the link already look like? Is it underlined?

TRY THIS · VS CODE

Now give that `<a>` tag `text-decoration: none;`.

Q3. What changed? Why do you think websites often do this to their links?

Part 2 — Choosing Your Fonts (font-size, font-weight, font-family)

Q4. Look at your `<h1>` and `<p>` text right now, without writing any font-related CSS. What differences do you already notice — size, thickness, style?

TRY THIS · VS CODE

Add `font-size: 40px;` to your `<p>` tag's styling. Try a few other values — `10px`, `100px`.

Q5. What changed? What do you think the number and `px` represent?

TRY THIS · VS CODE

Add `font-weight: bold;` to your `<p>` tag. Then try `font-weight: normal;`.

Q6. What did `bold` and `normal` do? Had you already made text bold before, without using CSS — where?

TRY THIS · VS CODE

Add `font-family: "Brush Script MT", cursive;` to your `<p>` tag.

Q7. What did your text look like with this font?

TRY THIS · VS CODE

Now try `font-family: Georgia, serif;` on the same tag.

Q8. Compare both `font-family` values you just used — each one has two names separated by a comma. Why do you think that is?

Part 3 — Main Activity: Style Your Portfolio

TRY THIS · VS CODE

Open your portfolio file from lab. Using everything you've learned so far — inline, internal, or external CSS, tag/class/id selectors, colors, and text properties — complete the checklist below.

Q9. Check off each item as you complete it, then briefly describe what you did for it:

☐ Style your name/heading using a selector (tag, class, or id)

☐ Give at least one element a custom color using hex or rgb

☐ Add a background-color to any section

☐ Apply text-decoration to at least one element (e.g. remove the underline from a link)

☐ Change the font-size, font-weight, or font-family of at least one text block
